

Users:

- 1 Super Admin
- 2 Brokers / Agent / Adviser
- 3 Agencies: Event Planner, Photographer, Caterers etc
- 4 Users

Super Admin

- Develop a centralized admin dashboard for Super Admin to manage and oversee all aspects of the website, including user accounts, profiles, content moderation, and analytics.
- Manage all user accounts (create, edit, delete) for Users, Brokers, and Event Management Shops.
- Broker, Event Planner, photographer etc Management: Approve new vendor registrations, manage Subscriptions, and oversee their activities.
- Highlighting Profiles Based on Payment: This feature allows the Super Admin to control the visibility of Event Management Shops and Photographer profiles in search results within the matrimonial site. Profiles can be prioritized based on the amount of money paid by the vendor (higher payers appear first).
- Allow the Super Admin to manually adjust the order of profiles in search results using a drag-and-drop interface or similar functionality. Profiles from vendors who paid more would appear first by default, but the Super Admin can override this order if necessary.
- Set membership tiers and associated features for Users (based on your strategy).
- Include features for Super Admin to monitor user activity, resolve disputes, and enforce website policies.
- Access advanced reporting tools for user behaviour and matchmaking effectiveness.
- Website Management: Manage overall website content, settings, and functionality.
- Option to block for user for inappropriate behaviour

API's Needed

- Payment Processing: Integrating a payment processing API (e.g., Phone Pay, PayPal) would be necessary.
- Social Login: Integrating social login APIs (e.g., Facebook Login, Google Sign-in) can simplify user registration and potentially provide additional profile information.
- Location Services : Integrating geolocation APIs (if user consent is obtained) could allow for location-based matching if desired.
- Chat Bot : The chatbot can offer icebreaker prompts to help users initiate conversations with potential matches, overcoming initial awkwardness.
- Firebase Subscription for Mobile number Authentication

Technical Considerations:

- Push Notification: Send users personalized notifications about New Matching , Found Match, New Message, promotions, etc.
- Intuitive Interface: Create a user-friendly and visually appealing interface that caters to all user roles, ensuring ease of navigation and a positive first impression.
- Robust Search and Matching: Implement a powerful search algorithm that considers a variety of factors for compatibility matching beyond basic demographics. This could include personality, interests, lifestyle choices, values, or compatibility tests.
- Secure Communication Channels: Employ secure communication features for private messaging, such as end-to-end encryption, to protect user privacy.
- Content Moderation: Implement a robust content moderation system to ensure all profiles, photos, and

messages adhere to community guidelines, preventing inappropriate content. User reporting options should also be readily available.

- Multilingual Support: Consider multilingual support to cater to a broader user demographic, especially if your target audience spans different regions or cultures.(Marathi, Hindi, English etc).

Development Time: 3 to 5 Months

Testing Time - 1 Month
